

QMS User Guide

Prepared for: Yahya Al Naaimi

A practical guide for daily use, Observation reporting, HSE review and action tracking.

Daily Start

Open QMS at <https://qms.ysaidea.com>. Start from My Work to see assigned reviews, actions, overdue items and notifications.

Main Menu

Home	Main dashboard and priorities
My Work	Assigned reviews, actions and overdue items
Reports	Submitted reports and screening
Safety	Observations, incidents, investigations, risks and lessons learned
Quality	NCR, CAPA, objectives, suppliers and actions
Assurance	Audits, inspections and compliance
Analytics	Trends and dashboards
Administration	Configuration for authorized users

Create an Observation

- Select Create.
- Select Observation.
- Choose Unsafe Act or Unsafe Condition.
- Complete Information, Description, Action Taken, Attachments, then Review and Submit.
- Submit the Observation.

Observation Information

Complete the core information before moving to description and review.

Area	Unit	Date	Time
Observer	Location	Department	Observation Type

HSE Review

HSE reviewers open the Observation record and use the Review tab. The reviewer decides Valid, Not Valid, or Needs More Information, then adds comments, risk level and a reporter-visible message only when needed.

Action Tracker

Actions are optional. Use Action Tracker only when follow-up is required.

- Action type
- Description
- Owner
- Department
- Due date
- Priority
- Evidence requirement
- Verification requirement

Reporter Visibility

Reporters see only simple updates. They do not see internal review, investigation, CAPA, action tracking or administration details.

- Internal HSE comments
- Internal review notes
- Investigation details
- CAPA details
- Action Tracker details
- Administration

Good Reporting Practice

Write facts clearly and include the time, place, condition and immediate risk.

Good example:

At 09:20, the temporary barricade was missing from the maintenance work area near Gate 4. People could enter the area without warning.

Avoid short unclear notes:

Bad setup. Needs fixing.

Support

Use Help for system feedback. Do not use Help to report unsafe acts, unsafe conditions or incidents. Use Observation or the correct reporting form.

Prepared for Yahya Al Naaimi. This guide is intended for practical internal use with QMS.
