

QMS User Guide

Prepared for: Yahya Al Naaimi

Daily Start

Open QMS at:

<https://qms.ysaidea.com>

Start from My Work. It shows assigned reviews, actions, overdue items and notifications.

Main Menu

- Home: main dashboard
- My Work: assigned work
- Reports: submitted reports and screening
- Safety: observations, permits, incidents, investigations, risks and lessons learned
- Quality: NCR, CAPA, objectives, suppliers and actions
- Assurance: audits, inspections and compliance
- Analytics: trends and operational dashboards
- Administration: configuration for authorized users

Create an Observation

Use Observation for unsafe acts and unsafe conditions.

- 1 Select Create.
- 2 Select Observation.
- 3 Choose Unsafe Act or Unsafe Condition.
- 4 Complete the pages:

- Information
- Description
- Action Taken
- Attachments
- Review and Submit

- 1 Submit the Observation.

Observation Information

Complete:

- Area

- Unit
- Date
- Time
- Observer
- Location
- Department
- Observation Type

HSE Review

HSE reviewers open the Observation record and use the Review tab.

The reviewer decides:

- Valid
- Not Valid
- Needs More Information

The reviewer adds comments, risk level and a reporter-visible message only when needed.

Action Tracker

Actions are optional. Use Action Tracker only when follow-up is required.

Each action should include:

- Action type
- Description
- Owner
- Department
- Due date
- Priority
- Evidence requirement
- Verification requirement

Permit Issuing

Use Permit Issuing when work needs formal control before it starts, such as hot work, confined space, electrical isolation, lifting, excavation, work at height or contractor work.

- 1 Select Create.
- 2 Select Permit.
- 3 Complete the pages:
 - Work Information

- Description and Risk
- Controls
- Approval
- Review and Submit

- 1 Save Draft if the details are not ready.
- 2 Submit for Review when the work, risks and controls are clear.

Permit Review and Field Control

Open Safety > Permits to search, filter and review the permit board.

Permit reviewers can move the permit through:

- Pending Review
- Approved
- Active
- Suspended
- Closed
- Cancelled

Do not issue a permit until the planned work window, hazards, isolation needs, gas testing, fire watch, standby person, PPE, training and linked procedures are understood.

Suspend the permit if conditions change. Close the permit only after the work area is checked and the closeout summary is recorded.

Reporter Visibility

Reporters see only simple updates.

Reporters do not see:

- Internal HSE comments
- Internal review notes
- Investigation details
- CAPA details
- Action Tracker details
- Administration

Good Reporting Practice

Write facts clearly.

Good example:

At 09:20, the temporary barricade was missing from the maintenance work area near Gate 4. People could enter the area without warning.

Avoid short unclear notes such as:

Bad setup. Needs fixing.

Support

Use Help for system feedback.

Do not use Help to report unsafe acts, unsafe conditions or incidents. Use Observation or the correct reporting form.
